Stakeholder Map and RACI: Cookie Cats Gate Test

Prepared by: Palak Gupta | Date: 15 October 2026 | Status: Final (portfolio case study)

The product lead owns the launch decision and the data analyst owns the analysis; the other two roles are consulted or informed. All roles are illustrative, since the dataset is public and no real company team was involved.

Stakeholder map

Stakeholder	Interest in the project	Influence on the decision	What they need from us	How and when we communicate
Product lead	Decides whether to launch gate_40	High	A clear go or no-go recommendation with the risk and business impact	One-page decision memo, then a 15-minute walkthrough at the end
Game design lead	Owns gate placement and the player experience	High	Which players are affected, and why it may happen	Review of the player-group findings before the memo is final
Engineering lead	Would build and ship any change	Medium	Early notice of the outcome so work is not started on a rejected change	Short summary after the decision is made
Data analyst (Palak Gupta)	Delivers a trustworthy analysis	Medium	Access to clean data and quick answers on assumptions	Owns all project documents and shares progress at each phase end

RACI

R = does the work, A = answerable for the result (one per row), C = consulted before the work is final, I = informed after.

Activity	Product lead	Game design lead	Engineering lead	Data analyst
Agree objectives and success criteria	A	C	I	R
Check data quality and handle outliers	I	I	C	A/R
Run statistical tests and Bayesian analysis	I	I	I	A/R
Analyse player groups by rounds played	I	C	I	A/R
Estimate business impact and confirm assumptions	A	C	I	R
Write the decision memo	C	C	I	A/R
Make the launch decision	A/R	C	I	C
Plan a follow-up test (longer window, revenue)	A	C	C	R

How to read this

- Every activity has exactly one A, so there is always one person to ask when something stalls.
- The data analyst is both accountable and responsible for the technical work, and only consulted on the final launch decision, which stays with the product lead.
- The value per retained player used in the business impact estimate is an assumption (Rs 50) that the product lead would confirm in a real project.
